NEW FROM PITTSBURGH

Rise of the Modern Hospital An Architectural History of Health and Healing, 1870–1940

JEANNE KISACKY

9780822944614 • 456 pp. • Cloth • \$65.00

Examines hospital design in the U.S. from the 1870s through the 1940s, a period that witnessed profound changes as hospitals shifted from last charitable resorts to premier locations of cutting-edge medical treatment. Heavily illustrated with floor plans, drawings, and photographs, it considers the hospital building as both a cultural artifact, revelatory of external medical and social change, and a cultural determinant, actively shaping what could and did take place within hospitals.

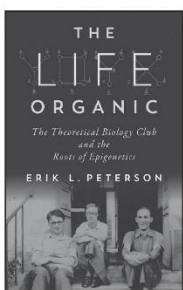

Human and Animal Cognition in Early Modern Philosophy and Medicine

**EDITED BY STEFANIE BUCHENAU
AND ROBERTO LO PRESTI**

9780822944720 • 408 pp. • Cloth • \$55.00

This volume views medical and philosophical debates on human intelligence and animal perception in the early modern age, providing fresh insights into the influence of medical discourse on the rise of modern philosophical anthropology.

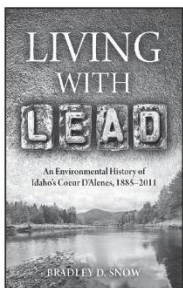

The Life Organic The Theoretical Biology Club and the Roots of Epigenetics

ERIC L. PETERSON

9780822944669 • 352 pp. • Cloth • \$45.00

Tells the forgotten story of the pursuit of a Third Way in biology, known by many names, including “the organic philosophy”—examining the scientists who defined and refined it and its persistence into the twentieth and twenty-first centuries. It also considers the creation of the subfield of epigenetics, a product of Third Way thinking, rooted among a group of scholars known as the Theoretical Biology Club.

Living with Lead An Environmental History of the Coeur d’Alenes, 1885–2011

BRADLEY D. SNOW

9780822964483 • 272 pp. • Paper • \$28.95

The Coeur d’Alenes, part of the Idaho Panhandle, is historically the world’s richest silver district, and a large producer of lead and zinc. Its legacy also includes environmental pollution on an epic scale. Yet, the same processes that damaged the environment and health also provided economic stability to thousands of residents. Snow untangles both the costs and benefits of a century of mining, milling, and smelting.
